Density

LPT

Density

Density = mass per unit volume   (density = "per" expression)

Density = A Derived, not basic unit

$$Density = \frac{mass}{volume} \qquad D = \frac{m}{v}$$

Density is a physical property of substances.
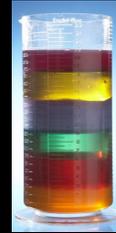

**A measurement of how much "Stuff" is in a unit volume**

LPT

Significance of Density

Fluids Layer Based on Density
- May be based on chemical composition
- Salt water more dense than fresh
- Cold water more dense than warm
- Fluids of different density resist mixing

Moving thru halocline   **Water layers by temperature**

Glacial melting is altering Arctic water density-driven-currents
Potential to destroy the Atlantic Gulf Stream (force an Ice Age)

LPT

Visible Bubbles Decrease Density of Liquids
(Gases less dense than liquids)

Methane bubbles from volcanic vents, especially in the Mid-Atlantic
Some believe some ship losses can be from encountering "mega-bubbles"

LPT

Star Trek Special Effects: Transporter

Swirling mix of salt water, fresh water, and metallic flakes

LPT

Warm Fluids Typically Less Dense

Lava Lamps

Convection Flow
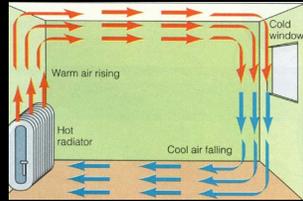

Hot-Air Balloon

Breezes

Galileo
Air Thermometer
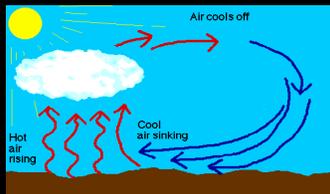

LPT

Much of Weather is Conflict Between Air Masses

Cold air more dense than warm air

Warm and Cold Fronts
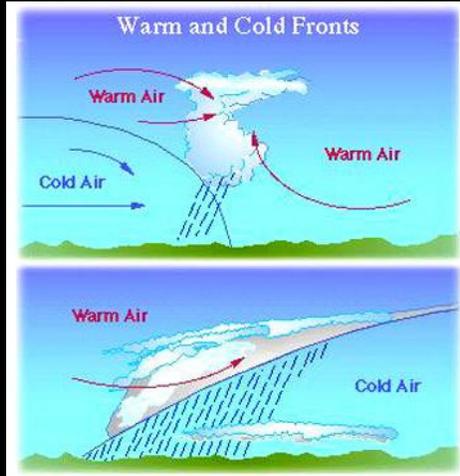

Fluids of different density Resist mixing

Barometer

LPT

Position in a Fluid
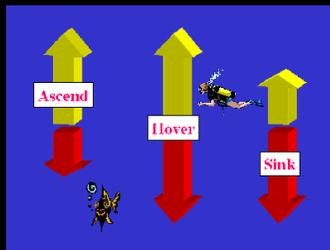

Depends upon Relative density
 Buoyancy Moves up
 Gravity Pulls Down

Divers, Submersibles, & Water Dwellers
 Control depth by altering buoyancy

Hot air balloons, blimps, & dirigibles
 **Control altitude by altering buoyancy**

Archimedes, A Gold Thief, and Buoyancy
http://www-personal.umich.edu/~lpt/archimedes.htm

LPT

4

"Lift"

Shape of wing causes rapid air flow on upper surface

Creates density differences above/below wing

Lower density above wing = lift

LPT

Boiling Point: Function of Weight of Air
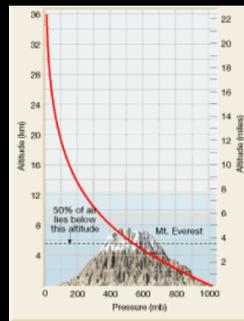

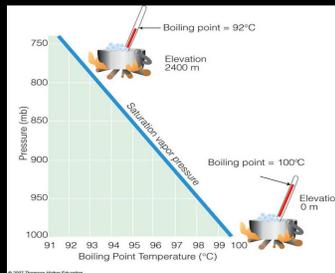

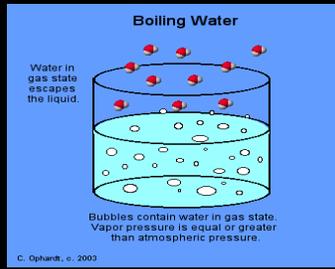

At high altitudes:
 Boiling point water lower
 Cooking temperature less
 Food takes longer to cook

LPT

5

Fat Floats

Weight in-water
Weight out-of-water

Difference ➜ % Body Fat

Fatty tissue less dense than muscle tissue

BodPod

Michigan: 5th Most Obese State
By 2030, estimated > 60 % MI will be obese
Type II Diabetes now considered an epidemic
Health care costs ➜ trillions
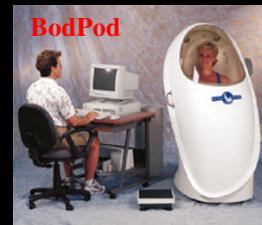

LPT

Sand/Water More Dense than People
Hollywood Horror Movie "Quicksands" Not Likely

Sometimes "Hollywood" is not exactly scientifically accurate

LPT

Continental Crust Less Dense Than Oceanic Crust
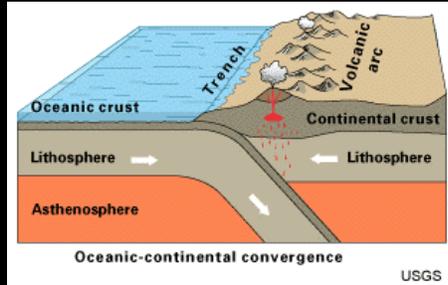

Earthquakes and Volcanoes:
Driven By Density Differences in Continental Plates

LPT

Balance Determined by Fluid Motion in Inner Ear

Alcohol alters density of fluid in semi-circular canals
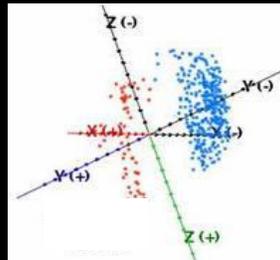

Inner ear is the last organ in the body to clear alcohol
May take 10-18 hours for alcohol to clear from inner ears

LPT

Depleted Uranium Weapons are NOT Nuclear Devices

Uranium

Density (g/mL)
Al =   2.70
Fe =   7.96
Pb = 11.4
Hg = 13.53
U = 19.07
Au = 19.30
Os = 22.67

Kinetic Energy = ½ mv²

Greater density = more momentum on impact

LPT

Water & Ice

Water   **Ice**

Ice less dense than water, so it floats

Water has maximum density (1.000 g/ml at 4 °C)

If ice did not float, most fresh water critters would not survive winter

Form & Function Are intimately related

LPT

Relative Density Controls My Buoyancy!

LPT

Density Lab

LPT

Lab Measurements
Always 1 more digit than measuring device

Distance (cm) measurements: **2 decimal digits**

Mass measurements: **all decimal digits**

Volume (ml) measurements: **1 decimal digit (> 10 mL)**
2 decimal digits (10 mL)

LPT

Lab Notebook Measurements

Electronic Devices: Record All Displayed Digits

Non-Electronic Scales: Record 1 decimal digit beyond scale

LPT

Today's Lab (Work in Pairs)

Determine the Density of a Liquid

Each lab pair: use a 10-mL graduated cylinder & a wash bottle

"tare" the balance with graduate cylinder.

Carefully transfer ~ 1 mL of your liquid to the graduated cylinder

Measure & record the mass & volume of your liquid
  Balance: All Digits   10 mL Graduate: 2 decimal places

Repeat 6x, adding about 1 mL each time, until you have ~ 7-8 mL total

Exchange data with the other pair in your group.

Meniscus

Density => Determined by plotting your mass/volume data

LPT

Determine the Density of a Regular Shaped Solid

Use a caliper to measure the diameter of the marble
Record dimensions

Measure and record the mass of the object

Caliper gives diameter (d) of the marble

Density = Mass / Volume

Volume of Sphere = $4/3 \, \pi \, (d/2)^3$

$r = d/2$

d

LPT

Determine the Density of an Irregular Shaped Solid

Measure & record the mass of one of the rocks

Measure / record the volume of water in ~ ½ filled 100 mL graduate cylinder

Carefully add the object to the graduated cylinder
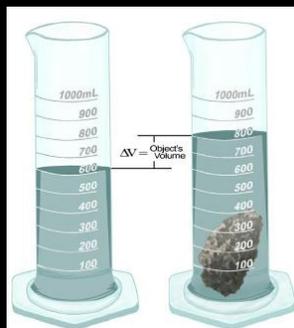

Measure and record the new water volume.

Balance: All Digits   100 mL Graduate: 1 decimal places

Density = Mass / Volume

Volume of Object:
Volume of water displaced

LPT

Data:

Record all your measurements

Density of a Liquid

Table: mass & volume for the two liquid samples

Density of a Regular Solid

Record your mass and volume measurements

Density of the Irregular Solid

Record your mass and volume measurements

LPT

12

Calculations

Determine the Density of a Regular Shaped Solid

Density = Mass (g) / Volume (mL or cm³)
Density = Mass (g) / 4/3 π (d/2) ³ (mL or cm³)
(mL or cm³ is a derived unit)

Determine the Density of an Irregular Shaped Solid
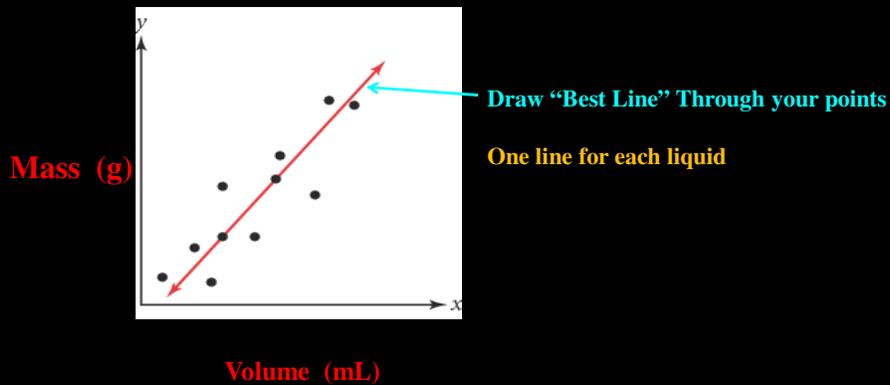

Density = Mass (g) / Displaced Water Volume (mL)
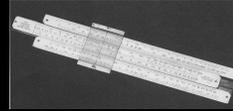

LPT

Calculations (Based on Graph Results)

For Density of a Liquid
For each of the 2 liquids,
plot (As a RESULT … use full page) mass vs. volume

Mass (g)

Draw "Best Line" Through your points

One line for each liquid

Volume (mL)

LPT

Calculations (Based on Graph Results)

For Density of a Liquid

For each of the 2 liquids,
Determine the slope of each "best" line

Point = (X_2, Y_2)

The slope triangle shows the vertical and horizontal change from one point to another.

$$\text{Slope} = \frac{\text{Change in y axis}}{\text{Change in x axis}}$$

$$= \frac{(Y_2 - Y_1)}{(X_2 - X_1)}$$

Slope = Mass / Volume
Slope = Density

Point = (X_1, Y_1)

Points from "best" line, not data points

LPT

Calculations (Based on Graph Results)

The slope triangle shows the vertical and horizontal change from one point to another.

When the plot of two variables gives a straight line, the variables are directly proportional

LPT

Results

Tabulate the densities you calculated for each sample
Graph Your Density Data

Conclusion

Does graphical data imply that mass and volume are directly proportional?

Which of the two liquids studied is more dense ?

Infer the identity of your unknown solid

Rock Sample Densities:
Magnetite   5.00 g/mL
Basalt   3.00 g.mL
Granite   2.90 g/mL
